ABOUT ME

DevSecOps/Platform Engineer with 8+ years of experience building scalable DevSecOps platforms across AWS and GCP. Led Kubernetes-based platform initiatives, improved developer onboarding through self-service IDP solutions, and focused on automation, security, and developer productivity.

EDUCATION

B.TECH IT - 70%

SVCE, Anna University
Aug/2014 - May/2018

HR. SEC. - 96%

S.V.V.Hr.Sec.School, Krishnagiri
June/2013 - Mar/2014

SKILLS

CLOUD AWS | GCP
CONTAINER & ORCHESTRATION DOCKER | PODMAN | KUBERNETES |
OPENSIFT
IAC TERRAFORM | ANSIBLE
SCRIPTING PYTHON | SHELL
CI/CD GITHUB ACTIONS | TEKTON | ARGOCD
SECURITY Sonarqube | Fossa | Checkmarx | Cymark
PLATFORM ENGINEERING BACKSTAGE (IDP), DEVELOPER PORTALS
OBSERVABILITY PROMETHEUS | GRAFANA | ELASTIC | KIBANA
OTHERS LINUX | SRE PRINCIPLES | FINOPS | AIOps
LEADERSHIP & STRATEGY ARCHITECTURE | MENTORSHIP

CERTIFICATIONS

Certified Kubernetes Administrator - Aug 2026
AWS Certified Cloud Practitioner - Apr 2026

ACHIEVEMENTS

Awarded Best Newcomer at Devops Talent awards - Logic Information Systems.
Received SpotLight Award - Comcast India

EXPERIENCE

FORD MOTOR COMPANY | SENIOR PLATFORM ENGINEER

Aug 2024 – Present | Chennai, India

- Designed and built an Internal Developer Platform (IDP) enabling self-service CI/CD onboarding and infrastructure provisioning, reducing developer onboarding time by 60% and supporting 20+ engineering teams.
- Led migration from Helm-based deployments to a GitOps model using ArgoCD, implementing automated PR-based image updates—improving deployment traceability and eliminating token-based authentication risks.
- Centralized CI/CD service account and secret management, reducing credential rotation effort by 70% and improving audit/compliance readiness across pipelines.
- Developed reusable Tekton pipeline templates adopted across frontend, backend, and monorepo services, significantly improving deployment consistency and reducing pipeline duplication.
- Introduced automated regression testing for pipeline templates, reducing production pipeline failures by 30% and ensuring consistent CI/CD standards.
- Led large-scale NX monorepo upgrade, managing breaking changes, dependency resolution, and stakeholder communication across multiple teams.
- Built platform adoption dashboards, enabling visibility into usage metrics and improving onboarding tracking and platform adoption by 35%.
- Collaborated on AI-driven platform enhancements, improving observability, developer productivity, and support efficiency through AIOps initiatives.

SQUARESHIFT TECHNOLOGIES | SENIOR DEVSECOPS ENGINEER

Jan 2023 – June 2024 | Chennai, India

- Implemented Kubernetes monitoring using Elastic Agent and Kibana dashboards, improving system observability and issue detection.
- Optimized cloud costs through automation, including VM auto-shutdown and resource monitoring dashboards.
- Designed and deployed GKE clusters to support Kafka-based data mirroring from legacy systems.
- Built CI pipelines using GitHub Actions for DBT workflows, enabling automated build and deployment of containerized workloads.

COMCAST | SENIOR DEVOPS ENGINEER

July 2021 – Jan 2023 | Chennai, India

- Managed and maintained 100+ servers supporting video payment and billing systems, ensuring high availability and security compliance.
- Automated vulnerability remediation using Ansible, reducing manual effort and improving patching efficiency.
- Migrated and deployed transaction reporting jobs across environments, improving system reliability.
- Integrated Nagios with ServiceNow to automate incident creation, reducing response time and improving operational efficiency.

LOGIC INFORMATION SYSTEMS | DEVOPS ENGINEER

March 2018 – July 2021 | Chennai, India

- Built and managed cloud infrastructure and CI/CD pipelines for enterprise applications.
- Developed Jenkins pipelines to build Docker images and deploy applications to AWS ECS.
- Implemented CI/CD workflows integrated with SonarQube for code quality and security checks.
